

Deep Tech

November 2019

Purpose:

Large potential
impact

Long time to maturity

Substantial requirement
for capital

Deep tech innovations are often radical and may create new markets or disrupt existing ones. Deep tech companies often address big societal and environmental challenges and have potential to impact everyday life.

The time required to move from basic science to applicable technology in deep tech exceed the development time of start-ups based on widely available technology ("shallow tech")

The demand for large early-stage funding for R&D and prototype development and lengthy life cycle of deep tech start-ups forces them to find innovative ways of funding.

Här i Ludvika är vi
alla deep-tech

Thank you

Aapo
